Calgaz, the world's leading manufacturer of calibration gases and equipment, is proud to offer the most comprehensive range of specialist regulators in the world for non-refillable and portable gas cylinders.

The 4200 Series regulator, also known as the "Trigger" is designed to quickly release a small amount of gas. Pressing the trigger activates the regulator and dispenses gas at a specified preset flow rate. The Trigger regulator is a single stage flow control device.

There are four models. The 4205 is our basic model used for low flow rate applications up to 4.0 LPM, this has no pressure gauge. The 4206 also has no pressure gauge and can be used for flows up to 18.0 LPM.

The 4210 and 4211 are both fitted with inlet pressure gauges and allow flows of 6.0 LPM and 18.0 LPM respectively. These regulators are primarily designed for Ethanol, non-reactive mixtures and for ppm levels of H₂S and SO₂ mixtures.

All regulators carry a 24 month warranty and we recommend replacing them after 5 years of service. These regulators can often be shipped to you the next working day. Contact us to find out more information.
